02

COMPANY OVERVIEW

Newon builds digital products and services for everyday and business problems, and intends to grow them as a connected set of businesses. The six are personal apps and AI, life-stage services, a senior and family platform, client digital services, and brand and design production.

Founding purpose

Founder Nawon plans, designs, develops, and operates the products. The purpose is to solve scattered life and work problems with specific products, then expand from what has actually been built.

What exists now

11 apps on the stores, the Newon website, personal AI in the apps and on the web, client web and app work, and brand and digital production. 404: HUMAN is a playable game and is not one of the six investment businesses.

How expansion works

Apps and production experience already built become shared technical and operating capacity. Each business has its own customers and revenue model, and they do not grow at the same speed.

Operating form

Public materials do not confirm incorporation or whether the operator is a sole proprietorship or a company. This document does not treat Newon as a confirmed corporation, or the six businesses as separate legal entities or independent equity.

03

BUSINESS PORTFOLIO

Operating

01 NEWON APPS

Builds everyday, self-management, family, and life apps, and expands account and service links around Newon+ in stages.

Customers: Mobile users

Operating · enterprise AI is planned

02 NEWON AI

Personal AI is available. Enterprise search, work automation, and custom agents are a development direction.

Customers: Individuals, later company teams

Preparing

03 LIVON

A platform concept for life-stage needs from the teens through the seventies. Not a launched service.

Customers: People whose life stage is changing

Preparing

04 ONGIL

A staged plan for senior and family living support, information, and care discovery.

Customers: Seniors and families

Operating · SaaS is not launched

05 NEWON BUSINESS

Client web and app development for companies and small businesses. Own SaaS and AI products come later.

Customers: Small businesses, startups, companies

Operating

06 NEWON STUDIO

Brand planning, design, web and app UI/UX, and digital production as client projects.

Customers: People and companies needing a brand or digital product

04

PRODUCTS & SERVICES

NEWON APPS

Each app has its own job. Newon+ expands accounts and links in stages. Data is not already shared automatically across every app. Eleven are released and two are in development.

Released

OX MONTH

A daily O/X habit record

Now O/X logging, reflection, and pattern checks

For People building a daily record

Next Deeper logs, weekly and monthly insight, pattern analysis. A longer-term direction is AI reflection

Paid feature details and revenue are not published as of 2026-09-24.

Released

SubPing

Subscription tracking

Now Subscription tracking and cost overview

For People with several subscriptions

Next Auto-add, payment detection, renewal and price-change alerts, and shared subscriptions are later plans

Paid feature details and revenue are not published as of 2026-09-24.

Released

Savy

Spending record with AI insight

Now A ledger and AI insight

For People tracking spending

Next Auto-import, categories, spending patterns, and budget ideas are expansion plans

Paid feature details and revenue are not published as of 2026-09-24.

Released

Pillmate

Medication reminders, stock, and family sharing. Not diagnosis or prescription

Now Reminders, stock, family sharing

For People and families managing a routine

Next Richer routines, stock forecasts, and supplement discovery are plans

Paid feature details and revenue are not published as of 2026-09-24.

Released

BabyLog

Parenting records, AI analysis, family sharing

Now Care logs, AI analysis, family sharing

For Caregivers and families

Next Community, shopping, and family-service booking are later directions

Paid feature details and revenue are not published as of 2026-09-24.

Released

PetLog

Pet life and health records, AI, family sharing

Now Life and health logs, AI, family sharing

For Pet households

Next Community, shopping, and clinic or grooming booking are later directions

Paid feature details and revenue are not published as of 2026-09-24.

Released

PiggyUp

Savings goals and frugality records

Now Savings goals and saving logs

For People with a savings goal

Next Shared challenges, ranks, community, and rewards are plans. No partnership results are claimed

Paid feature details and revenue are not published as of 2026-09-24.

Released

GoalUp

Set goals and track progress

Now Goal setting and progress

For People tracking a goal

Next AI goal analysis, group challenges, and ranks are expansion plans

Paid feature details and revenue are not published as of 2026-09-24.

Released

CountUp

Cumulative counts and streaks

Now Cumulative tracking and streaks

For People counting a repeated action

Next Challenges, ranks, badges, and rewards are expansion plans

Paid feature details and revenue are not published as of 2026-09-24.

Released

My World

Travel records, plans, and maps

Now Travel logs, plans, and maps

For People recording trips

Next AI recommendations, community, and stays, flights, or tours are planned. Booking and sales are not live

Paid feature details and revenue are not published as of 2026-09-24.

Released

Newon+

An account for sign-in, profile, and staged product links. Automatic data sharing across apps is not available

Now Unified sign-in, profile, and product links

For People using more than one Newon app

Next Bundle subscription, membership, shared benefits, and a personal AI layer come later

Paid feature details and revenue are not published as of 2026-09-24.

In development

EatOn

A food app in development for ingredients, dining, delivery, and taste-based ideas. Not launched

Now In development: ingredient ideas, dining and delivery discovery, situational AI suggestions

For People choosing and recording meals

Next Recipe community, grocery commerce, and deeper dining links are post-launch reviews

Paid feature details and revenue are not published as of 2026-09-24.

In development

FitOn

A fitness app in development for logs, routines, goals, and AI analysis. Not launched

Now In development: workout logs, routines, goals, AI analysis, and challenges

For People managing a training routine

Next Community, gear, and class or facility booking are post-launch reviews

Paid feature details and revenue are not published as of 2026-09-24.

NEWON AI

Now

Personal AI

Questions, planning, and in-app assistance are available in the apps and on the web. Personal support, schedules and tasks, organizing information, productivity automation, and links to other Newon services are how that scope can grow.

Planned

Enterprise AI

Internal search, document organization, repeat-work automation, customer-response support, custom agents, and links into client services are not launched products.

LIVON

The age bands below are a future service direction. The first release will not build every age at once. Research chooses the first area.

10

Study, paths, daily information

20

College, job search, independence

30

Career, housing, marriage and family

40

Family, habits, money, daily life

50

Career shift, life design, leisure, family

60

Around retirement, leisure, local information

70

Daily convenience, social connection, living support

ONGIL

The concept covers easier search for seniors, daily-service links, family sharing, habit support, local information, care discovery, a review of provider links, and accessible screens. The first step is interviews, then a first product. Medical practice, professional care delivery, and emergency response are not current services.

NEWON BUSINESS

Now

Client builds

Client websites and apps, digital systems fitted to a brand, improvements, and maintenance are project work. White-label configuration is a scope described on the business pages.

Planned

SaaS · AI

Work-management SaaS, automation products, enterprise AI, and a subscription operations product are not launched.

NEWON STUDIO

The current scope is brand planning and identity, logo and visual design, web and landing design, app UI/UX, digital product design, social and campaign design, and brand content. Later work is packaging, process, a collaborator network, retainers, and reusable production assets. Character IP is not offered as an external commission.

MARKET & CUSTOMERS

Market size and growth rates are omitted because no sourced figures were confirmed.

NEWON APPS

Who People who want an app for habits, money, subscriptions, or family records

Problem Records and chores scatter across tools, or the habit does not last.

Approach A specific app, plus Newon+ links.

Validation Watch the flow, return visits, feature use, and whether a paid step is plausible.

NEWON AI

Who Individuals, small businesses, and company operators

Problem Search, documents, and repeat work take time.

Approach Improve personal AI, and build enterprise automation after research.

Validation Time, quality, repeat use, and willingness to pay.

LIVON

Who People who need life-stage information

Problem When life changes, information is spread across places.

Approach Information and services matched to a situation.

Validation Interviews, demand research, and a first feature test.

ONGIL

Who Seniors and families

Problem Screens are hard, and daily information and family check-ins are awkward.

Approach Accessible screens and links to living and care information.

Validation Interviews, usability tests, and which services are actually needed.

NEWON BUSINESS

Who Small businesses, startups, and companies that need a system

Problem Teams lack the people and capacity to build and run a web or app system.

Approach Custom builds now, SaaS and AI only where demand repeats.

Validation Inquiries, project demand, repeat tasks, and maintenance demand.

NEWON STUDIO

Who People and companies that need a brand or digital production

Problem It is hard to keep brand and web or app experience in one line.

Approach Planning through design and production as one service.

Validation Inquiry types, requirements, and follow-up work.

06

BUSINESS MODEL

Revenue that has not occurred is not shown as earned. No amounts are stated.

NEWON APPS

Models to confirm: per-app monthly or yearly premium, and paid features. Which apps already charge is not published as a figure.

Later: a Newon+ bundle, add-ons, and relevant partnerships or transactions.

Watch active use, return visits, paid conversion, retention, operating cost, and multi-app use.

NEWON AI

Model to confirm: personal AI premium. Revenue is not published.

Later: usage pricing, enterprise subscription, custom builds, and ongoing care.

Watch usage, repeat use, cost per request, willingness to pay, and repeat company use.

LIVON

There is no current revenue model. The service is not launched.

Under review: personal subscription, connection fees, stage partnerships, family plans, and paid features. Not all at once.

Watch demand by situation, repeat use, willingness to pay, and outside-link demand.

ONGIL

There is no current revenue model.

Under review: individual and family subscription, daily-service links, partnerships, institutional B2B or B2B2C, and add-ons. Professional care or medical billing waits on real capability.

Watch demand, independent senior use, family return use, willingness to pay, provider fit, and cost.

NEWON BUSINESS

Models to confirm: custom web and app projects, and improvement or maintenance agreements. Contract totals are not published.

Later: SaaS subscription, enterprise AI builds, and solution operations.

Watch inquiries and contracts, cost and time, project margin, maintenance demand, repeated requests, and features that could become a product.

NEWON STUDIO

Models to confirm: brand and design projects, UI/UX, and landing or digital production. Engagement totals are not published.

Later: packages, a monthly design retainer, and follow-up production.

Watch inquiries and contracts, time and cost, follow-up work, repeated services, collaborator cost, and margin.

EARLY-STAGE STATUS

What has been built, and the next validation step. Revenue, customer counts, partnerships, and funds raised are omitted because they are not in the public materials.

11 released apps

OX MONTH, SubPing, Savy, Pillmate, BabyLog, PetLog, PiggyUp, GoalUp, CountUp, My World, Newon+. As of 2026-09-24.

In development

EatOn, FitOn. They are not counted as launched.

Web and AI

newon.app and the product pages are operating. Personal AI is available in the apps and on the web.

Business · Studio

Custom web and app work and brand and digital production can be delivered. Own SaaS is not launched.

LivOn · Ongil

Planning and preparation. Not launched products.

Newon+

Sign-in and per-app links are expanding in stages. Automatic data sharing across apps is not offered.

Newon will validate demand and refine revenue models in stages on top of products that already exist. 404: HUMAN is a separate playable game.

NEWON APPS

Improve the live apps, and add features only where demand shows up.

- Stability and usability
- Per-app response
- Newon+ account and links
- A multi-app subscription, under review
- Deepen apps with demand
- New apps only in stages, from operating results

Keep each app's job, and connect them through Newon+.

NEWON AI

Improve personal AI, then expand to company AI where repeat work is real.

- Quality and usability
- Cases from real requests
- Research repeat company problems
- A first search and automation version
- Validate quality and operating cost
- Charge and sell to companies only after validation

AI and automation that individuals and companies can use for their own jobs.

LIVON

Do not launch every age at once. Research picks the first area.

- Life-stage research
- Segment by situation, not only age
- Choose the first customer and problem
- An MVP
- Test and revise
- Expand only validated areas
- Outside partnerships only if needed

A platform that connects information and services as life changes.

ONGIL

Start with what seniors and families will actually use, and with access.

- Interviews
- Repeated frictions
- Choose the core feature
- Accessible UX
- A first product and usability tests
- Test family use
- Review provider and institution fit
- Expand only what validated

Living support a senior can use, and a family can check.

NEWON BUSINESS

Use client work to see demand, and productize only repeated requests.

- Write down the web and app scope on offer
- A consult and delivery path
- Collect repeated work problems
- Review which shared features could be a product
- A first SaaS or AI version
- Validate cost in a real client setting
- Review maintenance and subscription

Run client builds and own software together.

NEWON STUDIO

Turn the production that is possible today into a system, and widen it from real projects.

- Write down services and scope
- Portfolio and consults
- Plan, produce, review
- Follow-up production demand
- Package repeated services
- Collaborators matched to project size
- Retainers and longer relationships

One system from brand planning through digital production.

ROADMAP

No launch dates or hiring dates are set. Order can change with people, investment size, and validation. The six businesses do not move at one speed.

PHASE 01 Check the base and set priority**APPS**

Operating state, core features, improvements

AI

Features and operating cost

LIVON

Demand research and the first area

ONGIL

User research and the core problem

LIVON

The life areas that proved out

ONGIL

Support features and partnerships that proved out

BUSINESS

SaaS and AI from shared demand

STUDIO

Production and collaboration that proved out

TYPE 01

Newon as a whole

A review of a growth plan across all six. The purposes are shared technology and operations, quality of live products, AI and new platforms, specialists and contractors, customer acquisition, and staged execution.

TYPE 02

One business

Review the plan and use of funds for Apps, AI, LivOn, Ongil, Business, or Studio. Choosing one business does not mean independent equity in that business.

The receiving entity, structure, terms, and scope of funds are set with the investor. No target amount, equity, or valuation is stated.

USE OF FUNDS

Amounts and allocation ratios are set only after scope, people, quotes, and terms are known.

Whole

1. Product: live apps, AI, and first versions of new platforms, plus validation
2. People and contractors: development, design, security, quality
3. Infrastructure: servers, data, AI APIs, security, monitoring, maintenance
4. Acquisition: per-product validation, content, marketing tests
5. Operations: accounting and legal review, contracts, required costs

APPS

App improvements, Newon+ links, subscription and premium improvements, infrastructure, user validation

AI

Deeper personal AI, enterprise AI and automation, model and API cost, people, quality, security, usability

LIVON

Life-stage research, first customer, MVP, tests, an operating base

ONGIL

Senior and family research, accessible UX, a first product, usability tests, partnership review

BUSINESS

Web, app, and SaaS development, requirements, automation and AI, people, acquisition and operations

STUDIO

Production capacity, tools, collaboration, process, acquisition, and project operations

NAWON

FOUNDER & DEVELOPER

Nawon founded Newon and personally handles product planning, design, development, and operations. The released apps, newon.app, and the service directions were built in that role.

Unconfirmed education, career history, awards, client names, and fundraising history are omitted. Public materials describe a one-person execution. Specialists and contractors for development, design, security, and quality are a future plan, not a team already in place.
