INVESTMENT PROPOSAL
2026.11.18 · PRE-SEED

Four life platforms, one execution structure.

We build sharing & rental (SHAREON), family growth records (BABYLOG), pet life (PETLOG) and senior living & care (ONGIL) on shared technology, and commercialize step by step starting where customers actually pay.

SHAREON
Sharing & rental

BABYLOG
Family growth records

PETLOG
Pet life

ONGIL
Senior living & care

Investment ask ₩300M (negotiable alternative ₩200M) · valuation and stake to be negotiated

Nawon Kyung · Founder & CEO · NEWON · newon.app

Newon

The financial outlook is a post-investment business-plan scenario.

CONFIDENTIAL

A tech company building multiple revenue streams from four life platforms

NEWON is building, in Korea, a life platform that combines transaction fees, subscriptions, ads and business services, and will grow into a global life-platform company.

01	**Proven execution**	In about 6 months a solo CEO built 11 apps and listed them on the App Store and Google Play, and launched and runs BABYLOG (2026-06) and PETLOG (2026-06).
02	**Grow SHAREON first**	The first business to commercialize is SHAREON, the sharing and rental platform (nationwide launch Feb–Mar 2027). Next we monetize PETLOG and BABYLOG, which are already live, and the senior platform ONGIL restarts in June 2027 with a final launch targeted for October.
03	**Multiple revenue streams**	Transaction fees · shopping, booking & affiliate fees · individual & family subscriptions · search & recommendation ads · brand campaigns · business & institution services. No reliance on a single revenue stream.
04	**Repeatable growth mechanism**	Designed so that more transactions grow fees, more users grow subscriptions, and more supplier and business participation grows ads and business revenue.
05	**Global scalability**	BABYLOG and PETLOG already support 12 languages. After completing the revenue model in Korea, we expand overseas, adapting language, payments, legal and partnerships to each country.

Four specialist platforms, one multi-revenue engine

Commercialization order ①

SHAREON

Sharing & rental

National launch Feb–Mar 2027

Rental platform for goods, spaces and passes · 155 categories · 4 transaction types

C2C · C2B fee
10%

B2C fee
8%

B2B fee
7%

Sponsored search ads
₩99,000/30 days

Local & category recommendations
₩59,000/30 days

Supplier promotions
₩199,000/month

Brand campaigns
Per case

Asset-management SaaS & API
Long-term

Commercialization order ②

BABYLOG

Family growth records

Live

Growth records the family shares from pregnancy to high-school graduation · 12 languages

Family Premium
₩9,900/month · ₩99,000/year

Shopping & group-buy fee
8%

Expert second-hand fee
7%

Experience & kids-café booking
8~10%

Parenting & education sponsored ads
₩100,000/30 days

Clinic & education-institution SaaS
₩99,000/month

Brand campaigns & corporate partnerships
Per case

Advanced AI features
Long-term

Commercialization order ②

PETLOG

Pet life

Live

A pet-life platform connecting health, daily life, social, care, booking, shopping and travel · 12 languages

Family Premium
₩7,900/month

CARE-M personal care
12%

CARE-P business booking
8%

Business Premium
₩29,900/month

Local recommendation ads
₩19,900~49,900

Sponsored search ads
₩29,900~79,900

In-app shopping & group buys

Pet-friendly stays & travel partners
5% (proposed)

Commercialization order ③

ONGIL

Senior living & care

Restart Jun 2027 · Oct launch target

A senior living platform connecting seniors, families and institutions · health, medication, check-ins and emergency contact built

Family subscription (draft plan)
₩4,900–14,900/month

Advanced AI & family-care subscription
Proposal

Welfare & care-institution SaaS
₩39,000–199,000/month

Local-service recommendation ads
₩49,900/30 days

Living, mobility & booking brokerage
Within legal limits

B2G · Life Box · Safe Band
Long-term

Black text = confirmed prices & rates

Gray text = proposed commercial prices (adjusted to market response)

Basic records, safety and emergency features stay free

Prices & rates: CEO-confirmed policy (Nov 2026). BABYLOG shopping 8% and expert second-hand 7% are confirmed policy (personal direct trades 0%). Grey = proposed commercial price. All ads follow child and senior protection principles (sensitive records are never used for targeting or sold).

As transactions, users and businesses grow, revenue streams grow with them

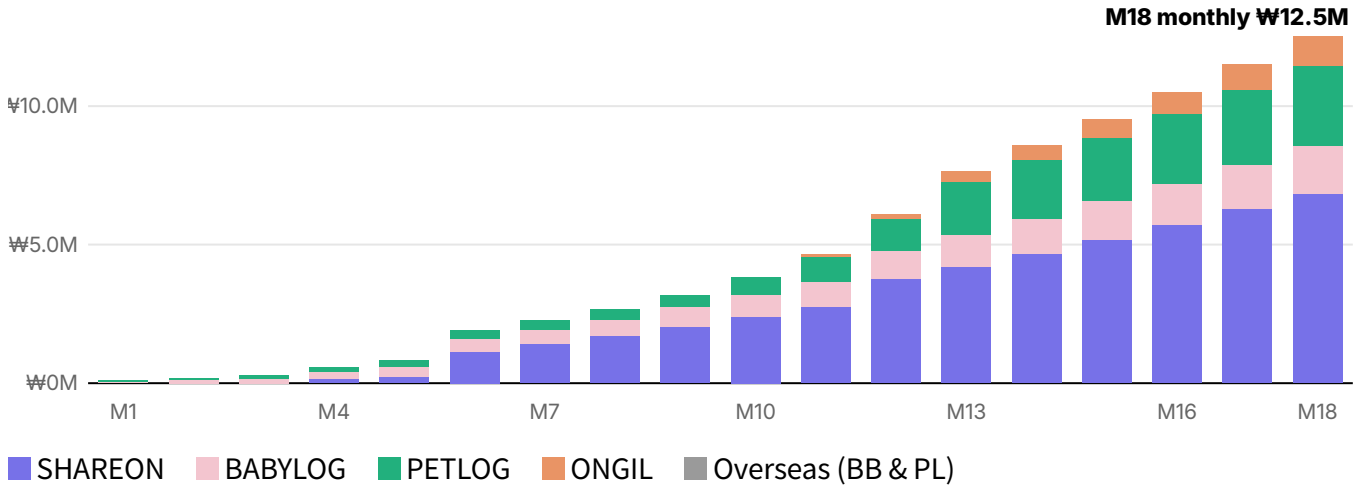

Transactions
More suppliers and users → more transactions
→ Rental fee 7–10% · CARE 8–12%

Users
Family invites, social and record habits → more active users
→ Family Premium subscription

Suppliers & businesses
More registered businesses & institutions → more demand for exposure
→ Search & recommendation ads · business & institution subscriptions

Shopping & brands
Touchpoints across records and life stages → purchase & booking demand
→ Shopping & booking fees · campaigns

₩300M base growth scenario — monthly revenue by business (excl. VAT)

₩300M plan	18-month revenue	M18 monthly revenue	Of which ads & campaigns	Cash at end of M18
Base growth	₩86.7M	₩12.5M	₩42.0M	₩21.1M
Accelerated growth	₩270M	₩38.4M	₩120M	₩80.7M
High-growth target	₩723M	₩106M	₩247M	₩29.3M

Next growth goal

M18 monthly revenue ₩12.5M (base) to ₩38.4M (accelerated); high-growth target ₩106M. The high-growth target is set by the CEO and requires transaction, supplier and user scale to be reached together.

Financials: integrated financial model — post-investment business-plan scenario · excluding VAT. The growth mechanism is a designed structure; actual conversion at each link will be updated with post-launch metrics.

With ₩300M, we launch SHAREON nationwide and scale monetization across all four businesses

The investment is not split evenly across the four businesses. The largest share goes to SHAREON's launch and growth; BABYLOG and PETLOG monetize products already on the market; ONGIL restarts in June 2027 and targets a final launch in October.

10 questions investors will ask first

01	**Why invest in NEWON?**	In about 6 months, a solo CEO built 11 apps, listed them in the stores, and launched and runs 2. This investment scales that execution speed into four revenue platforms.	p.11
02	**Why SHAREON first?**	Transaction fees and ad revenue arrive fastest, and the payment & settlement engine can be reused as-is for PETLOG CARE and ONGIL brokering.	p.14
03	**What are the revenue streams?**	Transaction fees · shopping, booking & affiliate fees · individual & family subscriptions · search & recommendation ads · brand campaigns · business & institution SaaS. Each of the four businesses has four or more revenue streams.	p.03
04	**How was ad revenue calculated?**	Advertisers × product price × frequency. Advertisers are SHAREON business suppliers, PETLOG local businesses, and parenting and senior service providers; children's and seniors' records are never used for targeting.	p.37
05	**How will business suppliers be secured?**	For 3 months before launch we sell directly to rental companies and space operators and list on their behalf. Talks are under way with 8 supply, payment and verification partners.	p.19
06	**How can one person run four businesses?**	A shared technology base raises development efficiency, and priority is fixed as SHAREON → PETLOG & BABYLOG → ONGIL. After investment we hire development, operations and ad-sales staff.	p.44
07	**What company will this be in 18 months?**	In the base scenario, 18-month revenue of ₩86.7M and M18 monthly revenue of ₩12.5M. The high-growth target scenario aims for ₩106M in M18 monthly revenue.	p.39
08	**How will we expand overseas?**	We add country-specific payments, legal work and partnerships on top of BABYLOG and PETLOG's 12-language base. The COMEUP 2026 OI applications (10 companies, 15 overseas regions) and materials have been submitted, and meetings are confirmed (CEO-confirmed).	p.35
09	**Where does the money go?**	Allocated in order: SHAREON launch & growth, development staff, ads & business commercialization, BABYLOG & PETLOG monetization, ONGIL restart.	p.41
10	**What are the key execution tasks?**	SHAREON payment & ID-verification contracts and launch quality bar, plus hiring to reduce founder dependence. There is a response plan for each task.	p.43

Financial figures are business-plan scenarios from the integrated financial model.

Life services break off at every life stage and for every person.

The four businesses serve different markets, but share a focus on the recurring tasks of family and daily life.

SHAREON

Needed items and spaces: buy them or go without

For occasional camping, filming or event gear and meeting or filming spaces, people either buy and store them each time or rely on peer-to-peer deals where returns, damage and settlement are uncertain.

→ Business and personal assets sit idle, and people who need them have no trustworthy short-term option.

BABYLOG

A child's records are split across family members

Feeding, sleep, growth and vaccination records are scattered across messengers and memos of parents, grandparents and caregivers, and infant apps are abandoned as the child grows.

→ Family members ask the same questions repeatedly, and growth records break off at each stage change.

PETLOG

Pet life is scattered across apps

Health notebooks, walk memos, co-guardian group chats and phone calls to book sitters and groomers are all separate, so records and care don't connect.

→ Pet households already spend monthly, but there is no single flow from records to booking.

ONGIL

Tools don't fit the people who need care

Apps are hard for seniors, and children living far away can only check medication, clinic visits and wellbeing by phone. Contact between institutions and families is scattered too.

→ Older users need easy records they can keep themselves, sharing only what they choose.

NEWON's answer

We solve each field's problems **deeply** with specialist apps, and build accounts, payments, design, security and operations tools **in common**. Each business monetizes only where customers actually pay — transaction fees, family subscriptions, care bookings, institution fees.

Next growth goal **Confirm problem size and willingness to pay through 20 user interviews (10 each for BABYLOG and PETLOG) and 10 SHAREON supplier interviews.**

Problem definitions are based on product design and app operating experience and will be refined with usage data after launch.

The four businesses sell separately, and share technology and operations.

The four apps are independent businesses with their own customers and revenue. Personal data is never combined across businesses without user consent; integration is a long-term task.

Shared base — separating what is actually shared from what is planned

Subscription-status server — actually shared	**Design system — actually shared**	**Flutter & Firebase structure — actually shared**
Payment & settlement engine — reuse plan	**Admin, reports & disputes — reuse plan**	**Unified account linking — not built**

Role of each business

SHAREON	**Transaction engine** Fees · booking · settlement · disputes	The business that generates revenue first. Payment & settlement engine to be reused for PETLOG CARE (planned)
BABYLOG	**Family accounts** Family group · permissions · subscription	Subscription-status server already shared by BB & PL (actual) · reuse of family permission model planned
PETLOG	**Subscription + transactions** Subscription · CARE bookings · business ads	The first business combining subscription (BB model) and transactions (SH model)
ONGIL	**Care expansion** Free for seniors · families & institutions pay	Extends BB/PL family sharing to senior care. Restart Jun 2027 · Oct launch target

Execution priority — not everything at equal weight

Priority 1	Priority 2	Priority 3	4th priority
SHAREON	**PETLOG**	**BABYLOG**	**ONGIL**
Payments & launch — largest share of the investment	V2 · family subscription · CARE-P	Fix security P0s · family subscription	Restart Jun 2027 · Oct launch target

Next growth goal **In M8, measure how much extra development is needed to reuse the SHAREON payment & settlement engine for PETLOG CARE-P (first test of the shared-base effect).**

What is actually shared today: the Newon+ subscription-status server (used by BABYLOG and PETLOG) and the design system. The payment & settlement engine has been validated only in SHAREON's development environment. Unified account linking is not built.

All four markets are already large and changing structurally.

SHAREON

₩8.2M

Single-person households (36.6% of all, 2025)

Use over ownership — SpaceCloud, an hourly space-booking platform, has ₩33B in cumulative transaction value

BABYLOG

7.46M

Population aged 0–19 (14.6% of total)

Resident registration, end of October 2026 · family customer range from pregnancy to high-school graduation

PETLOG

₩5.9M

Pet households (29.2% of households)

Monthly cost per pet ₩121,000 — the spending already exists

ONGIL

₩10.7M

Population aged 65+ (20.7%)

1.235M long-term care recipients — family caregiving becomes everyday

Why NEWON, why now

Shift in demand structure

Growth in single-person, aging and pet households, and families' long-term record needs for children and teens, are structural shifts each confirmed by public statistics.

Falling build costs

Flutter, Firebase and AI development tools now let one person launch and run iOS and Android apps, and NEWON has shown this with 11 registered apps.

Standardized trust infrastructure

PG, ID verification and payout agencies are offered as APIs, so even a small company can put trust mechanisms for peer-to-peer deals in place just by signing contracts.

What public statistics show

Size and direction of demand

NEWON's next growth goals

How many of these people use our app, come back, and pay

Next growth goal **Measure real demand (search volume, supplier count, sign-up conversion) in NEWON's initial categories rather than market size.**

Sources: Ministry of the Interior and Safety resident registration population by age (end of 2026-10) and 2025 Population and Housing Census (published 2026-07), KB Financial Group Research Institute Korea Pet Report 2025, Ministry of Agriculture, Food and Rural Affairs 2025 Animal Welfare Survey, National Health Insurance Service 2025, SpaceCloud interview (VentureSquare 2026). Not added together because definitions differ.

In about 6 months, a solo CEO built 11 apps and listed them in the stores.

The evidence of execution is not a plan but apps that passed review and went live in the stores. The experience of building 11 apps became the shared technology base for the four platforms.

Timeline

2026.03	Sole proprietorship opened (NEWON)
2026.04	First app development started (first file in dev folder 04-02)
2026.06	BABYLOG (06-13) · PETLOG (06-24) launched
2026.10	11 apps registered (store-checked) · ONGIL paused
2026.11	SHAREON launch prep · focus on 4 businesses · fundraising

What the CEO did personally

Business planning & product strategy	**UI/UX design**	**Flutter app development**
Firebase server & DB	**Store release & review**	**Subscription payment integration**
Multilingual localization	**Website**	**Partnership proposals & promotion**

LIVON · MY WORLD remain only as planning and development history and are excluded from the current investment scope and fund allocation. The other apps are development experience and use no new resources.

11 apps registered on App Store & Google Play — checked 11-12

App	Field	Status	Category
BABYLOG	Parenting & family records	Live · App Store 1.0.7	Current focus
PETLOG	Pet life	Live · App Store 1.0.5	Current focus
SubPing	Subscription management	Store listing	History
Savy	Households	Store listing	History
PillMate	Medication	Store listing	History
PiggyUp	Savings	Store listing	History
OX MONTH	Habit	Store listing	History
My World (MY WORLD)	Travel · records	Store listing	Out of focus · history
GoalUp	Target	Store listing	History
CountUp	Counter	Store listing	History
NEWON	Company apps	Store listing	Company

Next growth goal **Turn launch experience into monetization experience — publish retention and paid-conversion baselines for the two live apps within 2 months of investment.**

App list: CEO-confirmed (App Store & Google Play developer pages, 2026-10-21, 11 each). BABYLOG & PETLOG 600+ cumulative downloads (CEO-provided figure). Of the four core businesses, 2 are released in stores. About 6 months is the build period.

We built and launched the products. Now is the time to scale monetization and market expansion.

Business	Stage	What we have built so far	Next growth stage
SHAREON	Launch prep	Developed app, server and fee, refund and settlement policies · designed 4 transaction types and 155 categories · in talks with 8 supply, payment and verification partners	Payment & ID-verification contracts and passing the launch quality bar → national full launch Feb–Mar 2027 → ad products
BABYLOG	Live	Live on iOS & Android (since 2026-06-13) · records, family sharing, growth, vaccinations · 12 languages · subscriptions on sale	Family Premium ₩9,900 applied → parenting & education ads → institution SaaS
PETLOG	Live	Live on iOS & Android (since 2026-06-24) · health & daily records, co-guardians · 12 languages · subscriptions on sale	V2 (social & record expansion) → Family Premium ₩7,900 → CARE, Business Premium & local ads
ONGIL	Core features built	Health readings, medication, hospital schedule, check-ins, emergency contacts and large-text UI built · paused to focus on SHAREON → restart in June 2027	Restart Jun 2027 → extension development & integrated testing Jun–Sep → final launch target Oct

Where NEWON is now	Product development and store launches are done; we are now scaling monetization and market expansion. BABYLOG and PETLOG are live and selling subscriptions, and SHAREON is preparing its national launch.
What changes after investment	Family Premium pricing revision, ad product launch, SHAREON payments and business/institution sales all start at once. Until now the focus was on building products as a one-person team.
Sharing operating metrics	Within 30 days of investment we connect analytics in all 4 apps, and within 60 days share baselines for active users, family invite rate and paid conversion with investors.

Next growth goal **Within 60 days of investment, publish baselines for BABYLOG and PETLOG retention, family invite rate and paid conversion.**

Stage: based on repository and store records (2026-11-12). Actual downloads, subscriptions and revenue will be submitted from store consoles during due diligence (detailed appendix A6).

Product assets already built set the launch speed for all four businesses

Business	Product assets built	Quality evidence	Launch & commercialization stage
SHAREON	Goods & space listings · double-booking prevention · approval-based booking · fee, refund & settlement engine · report & block · seller center	1,208 of 1,234 integration tests pass · policy tests 20/20	Payment & ID-verification contracts → launch quality gates → national full launch
BABYLOG	Records, growth, vaccinations, family calendar, community · 12 languages · subscription	Passed store review & operating	Family Premium · ads · institution SaaS
PETLOG	Health & daily records, co-guardians, PDF for clinics · 12 languages · subscription	Store operation · V2 tests 332/332	V2 release · Family Premium · CARE · businesses & ads
ONGIL	Health readings, medication, clinic schedule, check-in texts, emergency contact · large-text UI	Simulator 6/6 · automated accessibility tests 24/24	Restart Jun 2027 → real-device testing → launch target Oct 2027

What the CEO did personally	Planning, UI design, Flutter development, Firebase server, store review, subscription integration, localization and website (newon.app) for 4 businesses · partner proposals
Shared technology base	Accounts, family sharing, payments, notifications, localization and a design system are built once and reused across four apps. AI development tools automate coding and testing to raise one person's productivity.
Core capabilities to build after investment	Independent QA, external security review, legal review · development, operations and ad-sales staff · data analytics

At meetings we demo the released apps (BABYLOG, PETLOG) and the SHAREON and ONGIL development builds live. Technical details such as repository versions and test history are in detailed appendix A4–A5.

Next growth goal **The first external spend after investment is SHAREON's independent QA and external security review.**

Test figures are internal test results (2026-11-08~10). SHAREON and ONGIL screens in this document are development-build captures; some BABYLOG and PETLOG screens are design concepts.

SHAREON

Sharing & rental platform for individuals and businesses

Targeting a national full launch in Feb–Mar 2027.

Targeting national full launch in Feb–Mar 2027 · payment & ID-verification contracts in progress

155
Category scheme

4 types
Transaction-type fees

Instead of buying for one use, rent and lend with confidence

SHAREON is a rental platform where individuals and businesses lend and borrow goods, spaces and digital passes by the hour, day or week. It ties booking, ID verification, handover/return records, payment & settlement and dispute handling into one flow, so people can trust transactions that don't transfer ownership.

Problem → solution

Buying and storing rarely used items	→	**Rent nearby for just the time needed**
Peer-to-peer rental feels risky (damage, returns)	→	**Handover/return photo records · report & dispute procedures**
Business and personal assets sit idle	→	**Individual and business suppliers earn in one app**

Customer structure — who uses it and who pays

Type	Customers	Payment method
C2C	Individual supplier → individual user	Supplier 10% · user ₩0
B2C	Rental companies & space operators → individuals	Supplier 8%
C2B	Individual supplier → business user	Supplier 10%
B2B	Business → business (events, equipment, spaces)	Supplier 7%

User journey

1	2	3	4	5
Search & request	**Approve & pay**	**Handover photos**	**Use & return check**	**Settlement & review**

Launch target scope — nationwide · 155 categories · 4 transaction types

Category scheme (155)	Count	Full-launch goal	Activation conditions
Goods · equipment	80	Included	Hazardous items after safety grading
Spaces	35	Included	Check business registration, sublease consent, etc. · spaces on legal hold after review
Digital · passes	35	Included	Disabled until rights-holder contracts and proof that terms allow it
Shared use	5	Included	Disabled until legal review is complete

Launch scope: CEO-confirmed direction (2026-11-12). Fees: confirmed policy (borne by lender, including PG and settlement costs). 155 is the confirmed count; 121 sub-item names await CEO confirmation.

The problem SHAREON solves — "using briefly", neither buying nor second-hand

Users

Single-person households · families · creators · event companies

People want camping gear, cameras, tools or baby goods for just a few days, but buying and storing them is a burden, and peer-to-peer rentals raise worries about damage, non-return and settlement.

Individual suppliers

Individuals with items

They want to earn from items they don't use, but it is hard to handle the identity, return and dispute risks of lending to strangers alone.

Business suppliers

Rental companies & space operators

They need a channel to fill idle time and stock, but big platforms charge for ads and rental-specialist channels focus on long-term contracts.

How it's solved

Buying → using for a period	Borrow only for the time needed · by hour, day or week
Uncertain deals → recorded deals	ID verification · handover/return photo records · report & dispute procedures
Cash & bank transfer → platform payment	PG payment · payout-agency settlement · cancellation & refund rules (100% if 72+ hours before · 90% at 24–72 hours · 70% under 24 hours)
Idle assets → income	₩0 listing and monthly fees; fees only on completed transactions

Why it differs from second-hand and rental — reasons customers choose it

Second-hand trading is a one-off transfer of ownership, with no rental period, handover, return or settlement flow. Rental companies focus on long-term contracts and high-priced items. SHAREON handles deals that need **short periods · repeat use · return confirmation**. Whether this difference drives real choice will be validated after launch through completion and re-rental rates.

Next growth goal **In the first 3 months after launch, measure drop-off at each step from request → acceptance → handover → return, and the dispute rate, to confirm whether trust features actually increase transactions.**

Customer problems are the basis of the business design and will be refined with usage data after launch. The refund rules are confirmed policy (S26, 2026-11-03) and do not match the current server code's day-based rules, so they must be fixed before payments go on (P0).

Confirmed fees on 4 transaction types create the base revenue

Transaction flow

Search & request → Supplier approval → **Payment (PG)** → Handover photos → **Return inspection** → Settlement

Confirmed fees — applied to all 4 types from full launch · ₩0 user fee, onboarding fee and monthly fee

Transaction type	Supplier → user	Platform fee	Borne by	Model's assumed average transaction value
C2C	Individual → individual	**10%**	Lender	₩25,000
B2C	Rental companies & spaces → individuals	**8%**	Lender (business)	₩60,000
C2B	Individual → business	**10%**	Lender	₩40,000
B2B	Business → business	**7%**	Lender (business)	₩300,000

What one transaction leaves (assumption)

Average ₩46,100 per transaction (weighted across 4 types)	KRW
Platform fee (weighted average)	3,914
VAT · refunds 3%	−463
PG 3.4% (incl. VAT, borne by the platform)	−1,724
Settlement · ID verification · disputes · CS	−900
Contribution margin	**827**

Do fees exceed costs?

Transaction value (GMV)	Total rental fees paid by users — not revenue
Revenue	Fees minus VAT and refunds
Contribution margin	Revenue minus PG, settlement, disputes and CS

An average transaction leaves about ₩827, but a ₩25,000 C2C deal leaves only about ₩370, and C2C deals below about ₩18,000 lose money. Business transactions (B2C, B2B) and repeat rentals produce the profit. Deposits are not revenue and carry no fee.

Next growth goal **Recalculate contribution margin with the contracted PG rate and actual average transaction value. A minimum fee (to address losses on small C2C deals) requires a CEO decision.**

Fees & who bears them: confirmed policy (S26, 2026-11-03). Average transaction value, mix (C2C 66 · B2C 28 · C2B 2 · B2B 4%), PG 3.4% (published standard rate, not a contract rate), settlement ₩150 and ID verification ₩100 (provisional) are financial-model assumptions.

Adding ads and business services to fees to grow revenue per transaction

Revenue streams	Prices & rates	Category	Payer · billing
Rental fee C2C · C2B	**10%**	**Confirmed**	Lender · at settlement after use
Rental fee B2C	**8%**	**Confirmed**	Rental companies & space operators
Rental fee B2B	**7%**	**Confirmed**	Business suppliers
Sponsored ads in search results	30 days ₩99,000	**Proposed price**	Rental companies & space operators · prepaid

Corporate asset-management SaaS & API	Business contracts	**Long-term**	Business · after 18 months

18-month revenue — ₩300M base (excl. VAT)

₩48.6M

18-month total (base)

Accelerated ₩166M

₩6.8M

M18 monthly revenue (base)

How ad revenue is calculated

Ad revenue = advertisers × product price × frequency

Advertisers = SHAREON business suppliers (base scenario: 40 at launch → 250 by M18)

Purchase rates = search 6% · recommendation 6% · promotion 2% (base) · starting 2 months after launch

Fee policy

- ₩0 user fee, onboarding fee and monthly fee
- PG and settlement costs are borne by the platform and included in the fee
- Ads labeled "Ad" · run alongside search-quality standards

Next growth goal **Open sponsored search and local recommendation ads within 2 months of launch and build ad revenue on a base of 250 business suppliers.**

Fees: CEO-confirmed policy (2026-11-03). Ad prices are proposed commercial prices, adjusted to market response. Financials: integrated financial model — post-investment business-plan scenario · excluding VAT.

Market, competition & customer acquisition — supplier relationships are the first moat.

₩8.2M

Single-person households

36.6% of all house-holds (2025)

₩33,000M

Cumulative transaction value of hourly space bookings

SpaceCloud (company announcement)

21M+

Daangn monthly users

Indirect competitor (company announcement)

Alternatives and competition

Alternatives & competition	Structure	Difference from SHAREON
Second-hand apps (Daangn, etc.)	Ownership transfer · 21M+ monthly users (company announcement)	No rental period, handover, return or settlement flow — direct threat if they add rentals
Hygglo (Nordics & UK)	Peer-to-peer rental · lender 20% + renter 10%	Not in Korea · SHAREON charges users ₩0
SpaceCloud	Hourly space booking · fee about 6–7%	Space specialist · SHAREON covers goods + spaces + business deals
Rental companies · district tool-lending centers	Long-term contracts / limited hours and stock	Targets for onboarding as B2C suppliers

Customer acquisition order

1. Supply first

For 3 months before launch we sell directly to rental companies and space operators and handle photography and listing for them, starting with high-supply camping, tools, baby goods, event equipment and filming spaces.

2. National launch · focused marketing

We launch with listing, search and transactions available nationwide, and spend ad budget first on categories and regions where supply has gathered. National listing available ≠ national transactions active.

3. Business suppliers

B2C 8% and B2B 7% apply from launch · a business seller center, staff roles and business verification reduce operating burden for businesses.

Next growth goal **Pre-onboarded supplier count and listings per category before launch serve as the supply criteria for the M3 launch decision.**

Sources: Statistics Korea 2025 Population and Housing Census (published 2026-07), press coverage of SpaceCloud and Daangn company announcements, Hygglo official blog (2025-10-02). Market figures show the size of demand, not SHAREON's customer count.

Policy items settled

The 10-31 partnership guide included "5% early-company rate (3 months, up to ₩10M)" and "PG fee separate", but the confirmed policy of 11-03 has no preferential rate and includes the PG fee. Companies that received the guide must be re-notified, and fees and pilot terms will be set out in writing in line with ONENEX's "fee consistency" comment.

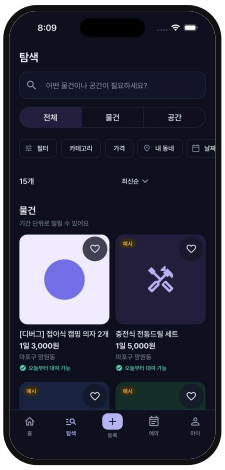

Next growth goal **Confirm terms (fees, pilot period, supply volume) in writing with companies that replied, and sign PG, ID-verification and payout-agency contracts right after incorporation (M1).**

Sources: CEO confirmation (11-06~07), S26 vendors (KCB form 11-02), partnership guide (10-31) compared with S26 confirmed policy (11-03).

BABYLOG

Family growth record platform

One child, one profile, the whole family together.

Live · App Store 1.0.7 (2026-08-17) · 12 languages

From pregnancy to high-school graduation, growth records the whole family shares

BABYLOG is a family platform that gathers a child's growth, health and daily records — from pregnancy planning through birth, infancy, preschool, elementary, middle and high school — in one profile that parents, grandparents and caregivers view together according to permissions. Core records stay free; revenue comes from Family Premium, parenting & education ads, institution SaaS and partner commerce.

Problem → solution

Records scattered across family members	→ **Shared records in a family group (up to 5)**
Record apps stop when the child grows	→ **One profile from pregnancy to school age**
Hard to find stage-appropriate info and services	→ **Stage-based info · institution & commerce links (planned)**

Customer structure — who uses it and who pays

Type	Customers	Payment method
B2C	Parents (main users)	Records free · Family Premium ₩9,900/month
B2C	Grandparents · caregivers · spouse	Free when invited
B2B2C	Postpartum centers · daycare · corporate benefits	Passes & partnerships (proposal stage)
B2B	Baby goods · education & experience businesses	Partnership & booking fees (not confirmed)

Ad principles

- Children's records, health information and personal data are never used for ad targeting
- Sensitive records are never sold commercially
- Ads shown only in the context of life-stage content · core records stay free

Base scenario calculation

Subscriptions: 131 paying families at M18 × ₩7,012 net/month
Shopping: from M5, 1.5% of actives × ₩35,000 × weighted 7.9%
Ads: from M9, 1 advertiser → +0.3/month · institution
SaaS: from M12

Next growth goal **For 3 months after the pricing revision, measure new → paid conversion and churn, replacing model values with actuals.**

Family Premium: CEO-confirmed policy (revised from current store Premium ₩19,900/month to family-level ₩9,900). Ad and institution prices are proposed commercial prices. Financials: integrated financial model — post-investment business-plan scenario · excluding VAT.

PETLOG

Integrated pet-life platform

From daily records to care and booking.

Live · iOS & Android (2026-06-24) · V2 in development

12
Supported languages

3 pillars
Subscription · transactions · businesses

From daily records to care, booking and places

PETLOG is a pet-life platform that builds photo & video social, personal care (CARE-M), professional business booking (CARE-P) and pet-friendly places & travel on top of pet health and daily records shared with co-guardians. It earns from family subscriptions, care & booking fees, Business Premium, local & search ads, and commerce & brand partnerships.

Expansion into a life platform

Health & daily records → social → care (CARE-M) → business booking (CARE-P) → shopping → pet-friendly travel. As records accumulate, demand for care, bookings and ads grows with them.

Base scenario calculation

Subscriptions: 104 paying at M18 × ₩5,596
CARE: from M11, 1% of actives × ₩50,000 × weighted 9.6%
Business premium: from M11, 2/month · 16 by M18
Ads: from M10, 3 advertisers → +2/month × avg ₩58,880
Shopping: from M5, 1.5% of actives × ₩40,000 × 7% (proposed)

Next growth goal **Measure booking conversion in a CARE-P pilot (3–5 businesses in 1 region), then expand Business Premium and local ad sales.**

Prices, rates & ad prices: CEO-confirmed policy (2026-11). Revised from the current store Plus ₩9,900/month to family-level ₩7,900. Financials: integrated financial model — post-investment business-plan scenario · excluding VAT.

ONGIL

Platform connecting senior living and care

Seniors use it themselves, sharing only what they choose.

Core features built · development restarts June 2027 · final launch target October 2027

28
Business areas

24/24
Automated accessibility tests

Seniors use it themselves and share only what they choose with family

ONGIL is a senior living and care app where older adults record health readings, medication, clinic schedules and check-ins themselves in large text and plain language, and send only the information they choose to their family. Senior safety and emergency features stay free; it is a senior living platform that earns from Family Premium, institution SaaS, local ads, partnerships and brokering.

Problem → solution

Apps are hard	→	**Large text · plain language · no sign-up**
Family far away can only worry	→	**Today's check-in · summary text to guardians**
Unsure how to reach help in an emergency	→	**Emergency contact 119 · 112 · my contact list**

Customer structure — who uses it and who pays

Type	Customers	Payment method
B2C	Seniors themselves (65+)	Essential features free — never charged
B2C	Adult children as guardians (40s–60s)	Family subscription (price not confirmed)
B2B	Day-care & home-care institutions	Institution SaaS (price not confirmed)
B2B2C	Corporate benefits · insurance · telecom	Care for employees' parents (proposed)

User journey

1	2	3	4	5
Show medicines	**Taken check**	**Health readings**	**Today's check-in**	**Summary to family**

Core principles

- Essential senior features (check-ins, emergency contact, basic records) are never monetized
- Nothing shared by default — only items the senior chooses go to family
- Does not guarantee medical diagnosis or emergency rescue and does not replace 119 or the public safety net

Sources: ONGIL partnership deck (2026-10-28), last repository commit (2026-10-19). All prices are proposals or draft plans.

Large-text, plain-language UI

Service competitiveness

An app seniors use themselves

Unlike telecom check-in services, seniors record for themselves and share only the information they choose with family.

Monetizing families and institutions together

Family Premium and welfare/care-institution SaaS grow together. Institutions bring families in.

Reuse shared payments & settlement

Use the SHAREON and PETLOG payment & settlement engine to quickly open living, mobility and booking brokerage.

Difference from existing alternatives

Existing alternatives	Structure	ONGIL's competitive edge
Telecom check-in services	Call & IoT based	Seniors record themselves · share only what they choose
Medication reminder apps	For general users	Senior UI · family connection
Institution operating systems	Focused on institutional workflows	Complements family communication — partner, not competitor
Care robots & devices	Hardware	Safe Band under long-term partner review

M18 monthly revenue (base)

Restart and launch plan

Jun 2027 (M7) official restart of existing development → extension development & integrated QA Jun–Sep → Oct 2027 (M11) final launch target → institution SaaS & local ads in sequence

Same for all scenarios and the ₩200M option (CEO-set target · subject to passing launch gates)

Principle

- Safety & emergency features are free
- Ads labeled and frequency-capped to avoid confusing or harming seniors
- No medical diagnosis; does not replace 119 or the public safety net
- Prices and rates confirmed through guardian and institution interviews after restart

Next growth goal **Right after restart, set Family Premium and institution SaaS prices through interviews with 10 guardians and 2 institutions.**

ONGIL prices and rates are commercialization proposals and will be confirmed through guardian and institution interviews after restart. Financials: integrated financial model — post-investment business-plan scenario · excluding VAT.

Customer acquisition strategy by business — supply first, families by invitation.

Business	First customers	Acquisition channels	Main alternatives & competition	Key metrics
SHAREON	Rental companies & space operators · users nationwide	Direct sales & listing on suppliers' behalf before launch → search ads & communities after national launch	Second-hand apps · rental companies · space-booking platforms	Pre-onboarded count · completion rate · re-rental rate
BABYLOG	Existing users · newborn families	App store optimization · family invites · postpartum-center PoC (proposed)	Free infant record apps · messengers	Invite rate · D30 · conversion
PETLOG	Existing users · businesses in the pilot region	Social sharing · local business sales · business ad products	Record, pet-sitter & booking apps	Conversion · bookings · business count
ONGIL	1–2 institutions · guardians	Institution pilot → families referred by institutions	Telecom check-ins · medication apps	Pilot results · willingness to pay

₩7,000

Assumed new → paid conversion

Shared by BB & PL

Customer acquisition in the first 90 days after investment

Business	30 days	60 days	90 days
SHAREON	Launch region & 5 categories confirmed	List of 100 suppliers · on-site sales start	Pre-onboarding agreement (free) · listing on suppliers' behalf
BABYLOG	Connect analytics · improve store copy	Improve family invite flow	Family Premium pricing applied
PETLOG	Connect analytics · fix V2 defects	List of businesses in the pilot region	V2 release · Family Premium applied

Business sales · partnerships

Of 8 SHAREON onboarding, payment, ID-verification and settlement talks, 5 have reached a reply or further (CEO-confirmed); contracts will be signed right after incorporation. The 25 domestic and overseas OI proposals are counted as drafted. The COMEUP 2026 (Dec 9–11, COEX) OI meetup application deadline is Nov 13, and meetings are confirmed after event matching.

Next growth goal **Measure actual acquisition cost by channel in the first 2 months of marketing; if it is 50%+ above the assumption, move that channel's budget to SHAREON supplier sales.**

Competition: based on public information and company announcements (appendix item ⑩ per business). Acquisition costs and conversion rates are all assumptions, replaced with actuals after launch. For SHAREON partnership & infrastructure progress see p.15 (8 in talks · 0 contracts). 25 domestic and overseas OI proposals have been prepared.

Enterprise Partnerships & Global Expansion Pipeline

COMEUP 2026 overseas OI application

10 companies separately · meetings confirmed (CEO-confirmed)

₩3.0M

Overseas 18-month revenue (high-growth target)

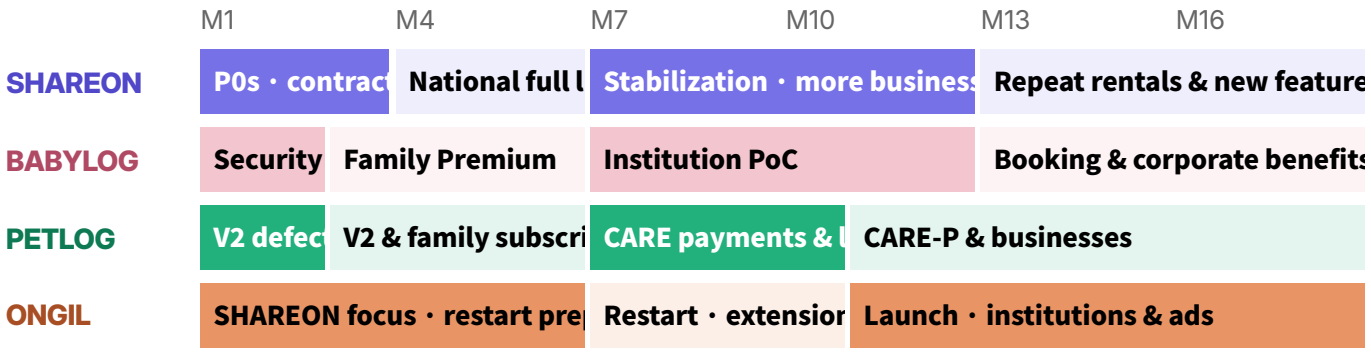

Overseas entry M13 · full growth afterward

Next growth goal **Once domestic app metrics exceed the bar, start with PETLOG in English-speaking markets.**

Financials: integrated financial model — post-investment business-plan scenario · excluding VAT. Overseas OI is at the meeting-confirmed stage after application and submission (CEO-confirmed); no partnership has been concluded. The high-growth target scenario includes overseas BABYLOG/PETLOG subscriptions and localization, marketing and legal costs from M13.

18-month execution roadmap

We do not run the four businesses with equal weight. The plan: expanded launch of SHAREON, BABYLOG and PETLOG in Feb–Mar, stabilization Mar–May, ONGIL restart in June and ONGIL final launch in October.

Key milestones and decision criteria

Timing	Milestone	Decision criteria
M3 (2027-02)	SHAREON launch decision	0 P0s · independent QA & E2E · PG, ID-verification and payout-agency contracts · legal review · external security review
M4 (2027-03)	SHAREON national full launch · payments go live (conditional)	Fees start on 4 transaction types · 50 transactions in the first month (assumption)
M6 (2027-05)	BB & PL Family Premium applied · metrics published	Retention, invite-rate & conversion baselines
M7 (2027-06)	Decision on enabling digital passes & shared use	Results of legal review and rights-holder contracts
M11 (2027-10)	PETLOG CARE-P · Business Premium	Bookings in the pilot region
M7 (2027-06)	Official restart of existing ONGIL development	Full repository audit · confirm unfinished features & technical debt
M11 (2027-10)	ONGIL final launch target	Pass quality, security, legal, contract and store-review gates
M12 (2027-11)	Start follow-on fundraising	Measured revenue by stream
M18 (2028-05)	18-month growth-target review	SH 923/month · 234 paying families (assumption)

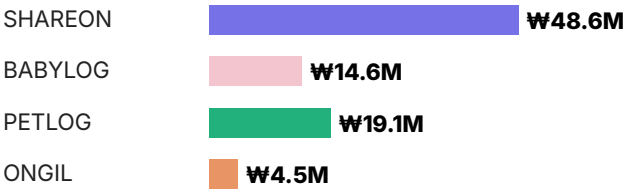

Next growth goal **Milestone results are reported to investors at the end of every quarter; businesses missing two quarters in a row get fewer resources.**

M1 = 2026-12 (assumed first month after investment). The schedule is a plan; if external contracts are delayed, the SHAREON launch moves to Q2 2027. Targets are base-scenario assumptions of the financial model.

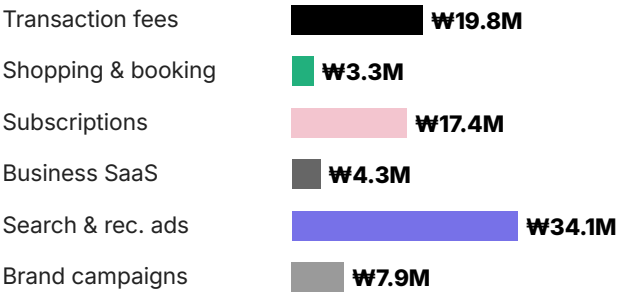

Four businesses × five revenue streams — not dependent on any single one

	SHAREON	BABYLOG	PETLOG	ONGIL
Transaction & shopping fees	C2C·C2B 10% · B2C 8% · B2B 7%	Shopping & group buys 8% · expert second-hand 7%	CARE-M 12% · CARE-P 8% · shopping 7% (proposed)	Living, mobility & booking brokerage (long-term)
Individual & family subscriptions	—	₩9,900/month · ₩99,000/year	₩7,900/month · ₩79,000/year	₩9,900/month (draft plan)
Search & recommendation ads	Search ₩99,000 · recommended ₩59,000 (proposed)	Sponsored ₩100,000 (proposed)	Local ₩19,900–49,900 · search ₩29,900–79,900	Local recommendation ₩49,900 (proposed)
Booking, brands & affiliates	Campaigns · supplier promotions	Experience booking 8–10% (proposed) · campaigns	Pet-friendly travel 5% (proposed) · campaigns	Senior partner commerce
Businesses & institutions	Asset-management SaaS & API (long-term)	Clinic & education-institution SaaS	Business Premium ₩29,900/month	Institution SaaS ₩99,000 (draft plan) · B2G

18-month revenue by business (₩300M base)

18-month revenue by stream (₩300M base)

Next growth goal **Of 18-month revenue, 48% is ads & campaigns, 23% transaction fees, 4% shopping, booking & affiliate fees and 25% subscriptions (base). Updated with measured figures every quarter.**

Financials: integrated financial model — post-investment business-plan scenario · excluding VAT. Ads = advertisers × price × frequency. Subscriptions = paying customers × price × (1 − 15% store fee) ÷ 1.1. Transactions & shopping = count × average value × fee rate (only the fee earned by the platform, not total transaction value), with PG and settlement costs deducted separately. Personal C2C second-hand direct trades and hospital bookings carry a 0% fee and are not counted as revenue.

Ad revenue grows with the number of onboarded businesses — advertiser acquisition plan

Timing	SHAREON ad suppliers	BABYLOG advertisers	PETLOG advertisers	ONGIL advertisers	Monthly ad revenue	Share of revenue
M6 (2027-05)	10	0.0 businesses	0	0	**₩0.86M**	45%
M9 (2027-08)	16	1.0 businesses	0	0	**₩1.5M**	47%
M12 (2027-11)	22	1.9 businesses	7	0	**₩3.11M**	51%
M15 (2028-02)	29	2.8 businesses	13	4	**₩4.9M**	51%
M18 (2028-05)	35	3.7 businesses	19	7	**₩5.9M**	48%

Advertisers and acquisition channels

Business	Main advertisers	Acquisition channels	Product
SHAREON	Rental companies · space operators · equipment brands	Sold to onboarded suppliers with exposure and booking reports	Sponsored search · local recommendations · promotions · campaigns
BABYLOG	Baby goods · education · family services	Sponsored content by life stage · direct brand sales	Sponsored content · banners · campaigns
PETLOG	Vets · groomers · hotels · cafés · lodging	CARE-P pilot businesses → Business Premium → local ads	Local recommendations · sponsored search · campaigns
ONGIL	Local senior services · living businesses	Starting with businesses in the institution pilot region	Local-service recommendations (labeled, frequency-capped)

Schedule tied to costs

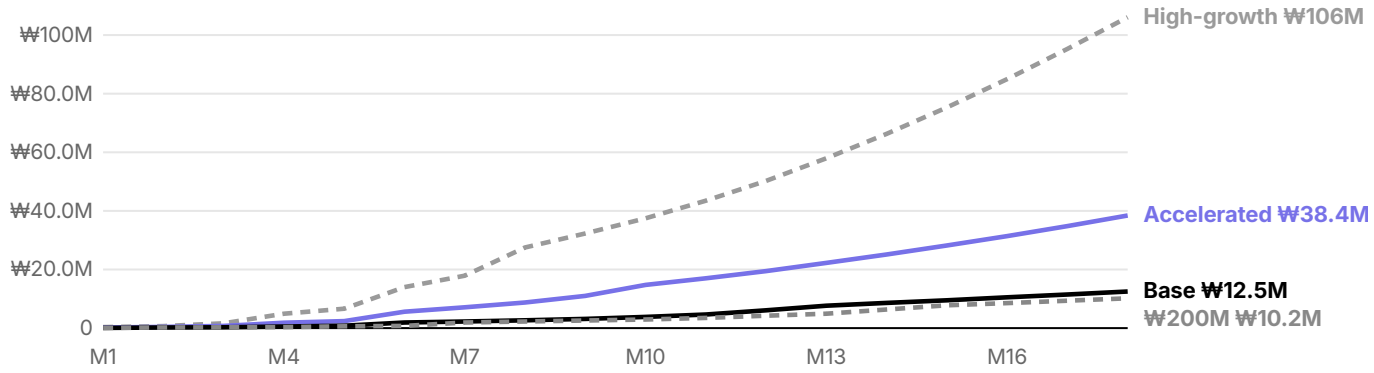

Timing	Executing ad commercialization	Reflected in financial model
M5	Build shared ad platform for 4 apps (delivery, settlement, reports)	₩6M one-off
M6	SHAREON sponsored search & local recommendations launch (2 months after launch)	Suppliers buying at 6% · 6% · 2%
M9~M10	BABYLOG sponsored content · PETLOG local & search ads	Starting with 1 to 3 advertisers
M12	1 ads & partnerships salesperson joins (when prior month's ad revenue passes ₩2M)	₩3.5M/month
M12~M13	SHAREON & PETLOG brand campaigns	1 per quarter
M13	ONGIL local service ads (2 months after the Oct 2027 launch)	From 2 advertisers

Next growth goal **18-month ad & campaign revenue of ₩42.0M (48% of total). We measure ad purchase rates and advertiser counts monthly and adjust sales staffing and ad-platform investment.**

₩300M base scenario. Ad revenue = advertisers × product price × frequency. SHAREON ad suppliers = business suppliers × sum of purchase rates by product (including multiple purchases).

18-month financial outlook — revenue from all four businesses included

Monthly revenue (excl. VAT)

Scenario	18-month revenue	Ads & campaigns	M18 monthly revenue	M18 monthly net cash	Cash at end of M18	Monthly break-even
₩300M base growth	₩86.7M	₩42.0M	₩12.5M	−₩10.7M	₩21.1M	After 18 months
₩300M accelerated growth	₩270M	₩120M	₩38.4M	−₩0.87M	₩80.7M	After 18 months
₩300M high-growth target	₩723M	₩247M	₩106M	−₩2.1M	₩29.3M	After 18 months
₩200M base	₩66.7M	₩33.9M	₩10.2M	−₩4.7M	₩20.9M	After 18 months
₩200M accelerated	₩201M	₩101M	₩28.9M	₩6.8M	₩76.4M	2028-01

₩343M

18-month operating costs (₩300M base)

Staff, marketing, launch & ad commercialization

₩9.0M

M18 cash assuming zero revenue

Executing only the fixed-cost plan still lasts 18 months

₩21.1M

Cash at end of M18 (₩300M base)

Follow-on fundraising prep from M12

Next growth goal

The high-growth target (₩106M monthly at M18) requires 12,064 SHAREON transactions a month, 800 business suppliers and 31,000 active BB/PL users. ₩300M keeps cash positive for 18 months, but if revenue reaches only 70% of plan, about ₩188M more is needed.

Financials: integrated financial model — post-investment business-plan scenario · excluding VAT. Costs: staff, marketing, launch, PG, servers, ad sales, ONGIL restart (M7) and overseas entry, plus acquisition costs, supplier sales, CS staff and shopping PG that scale with transaction and order volume. High-growth target = scenario back-solved to ₩100M monthly revenue at M18 (incl. overseas BB/PL).

₩300M investment vs. ₩343M of 18-month operating costs — business revenue covers the difference

The base scenario does not reach monthly profitability within 18 months. Revenue covers part of operating costs, and follow-on fundraising prep starts in M12.

Base scenario, 18 months	₩300M base plan	₩200M alternative
① Investment	₩300M	₩200M
② 18-month revenue (excl. VAT)	+ ₩86.7M	+ ₩66.7M
③ Variable costs (PG, settlement, CS, servers, ad operations)	− ₩22.2M	− ₩14.9M
④ Operating costs (staff, marketing, launch, legal, ad sales, ONGIL)	− ₩343M	− ₩231M
⑤ Cash at end of M18 = ① + ② − ③ − ④	**₩21.1M**	**₩20.9M**
Amount of operating costs covered by revenue (④ + ③ − ①)	₩65.6M	₩45.8M

Monthly P&L improvement path (base scenario)

Quarterly net cash flow	M1~3	M4~6	M7~9	M10~12	M13~15	M16~18	M18 monthly
₩300M base	−₩47.6M	−₩47.3M	−₩58.5M	−₩51.2M	−₩40.1M	−₩34.1M	−₩10.7M
₩200M base	−₩47.3M	−₩26.5M	−₩42.1M	−₩30.2M	−₩17.0M	−₩15.9M	−₩4.7M

Timing of follow-on investment decision

Timing	Follow-on investment decision
M9 (2027-08)	Size of follow-on investment judged on transaction, supplier and ad-purchase metrics 6 months after SHAREON launch
M12 (2027-11)	Start follow-on fundraising prep — model updated with actual revenue by stream
M15~M18	Target to close the follow-on round · based on ₩300M base M18 monthly net cash of −₩10.7M, about 2.0 months of runway after M18
High-growth target	M18 monthly revenue target ₩106M · minimum cash ₩29.3M — follow-on round is growth-acceleration capital

Next growth goal **Until the follow-on round, if quarterly net cash flow is 20%+ worse than plan, we first adjust marketing spend.**

Financials: integrated financial model — post-investment business-plan scenario · excluding VAT. Net cash outflow in M7–M10 includes ONGIL extension development (₩4M/month) and pre-launch integrated QA & security review (₩6M). Runway after M18 for the ₩200M option: about 4.5 months.

₩300M investment — centered on SHAREON, the rest in stages

Item	18 months	Share	Details
SHAREON launch & growth	₩137M	40%	QA · security · legal · PG · identity verification · operations & CS · marketing & supplier onboarding
Development staff (shared by 4 apps)	₩99.0M	29%	CEO · 1 developer (from M5) — payments, settlement, CARE, ads, ONGIL
Ads & business commercialization	₩30.5M	9%	Ad platform shared by 4 apps · ad & partnership sales (once ad revenue threshold is met)
BABYLOG & PETLOG monetization	₩21.0M	6%	Family Premium marketing · CARE & recurring-payment legal
ONGIL restart & launch	₩26.0M	8%	Extension development (M7–M10) · pre-launch QA & security · launch marketing
Infrastructure, incorporation & operations	₩29.9M	9%	Servers, AI & tools · incorporation · accounting & tax
18-month operating costs total	**₩343M**	100%	₩300M investment + ₩43.4M of reinvested business revenue (base scenario)

Spending order

Timing	Focus areas
M1~M3	Incorporation · PG & ID-verification contracts · SHAREON QA, security & legal · supplier pre-onboarding
M4~M8	SHAREON national full launch & marketing · developer joins · ad platform · BB & PL Family Premium
M7~M11	ONGIL restart, extension development & launch (Oct 2027 target) · ad & business sales
M12~M18	PETLOG CARE & business premium · BABYLOG institution SaaS · prepare follow-on round

Next growth goal **Get legal, PG and QA quotes by M3 to replace estimates with real quotes, and move any difference into the growth budget.**

Financials: integrated financial model — post-investment business-plan scenario · excluding VAT. Costs are estimates before quotes; salaries are estimates including the four social insurances.

₩200M alternative — same strategy, adjusted pace

Item	₩300M base plan	₩200M alternative
SHAREON launch	M4 (2027-03)	M5 (2027-04) · payment & settlement development outsourced
Development staff	Hire 1 developer (from M5)	Outsourced development + CEO
Ads & business commercialization	Ads launch from M6 · 1 salesperson (when threshold met)	Ads launch +2 months
PETLOG CARE & businesses	M11~	M14~
ONGIL	Restart M7 · launch target M11	Restart M7 · launch target M11 (same)
18-month revenue (base)	₩86.7M	₩66.7M
M18 monthly revenue (base)	₩12.5M	₩10.2M
18-month revenue (accelerated)	₩270M	₩201M
M18 monthly revenue (high-growth target)	₩106M	₩71.4M (₩28.7M short of ₩100M)
Cash at end of M18 (base)	₩21.1M	₩20.9M

With ₩200M, the strategy for SHAREON's nationwide launch and BABYLOG/PETLOG monetization stays the same. We use contractors instead of in-house developers and start ads and CARE later to run cash conservatively. The ONGIL schedule (restart in June, launch target in October) is unchanged. Even with zero revenue, ₩10.6M remains at the end of M18.

Next growth goal **If ₩200M is chosen, the outsourcing scope and SHAREON launch date (M5) are fixed within the first 30 days.**

Financials: integrated financial model — post-investment business-plan scenario · excluding VAT.

Key execution tasks and response strategies

Key execution tasks	Response strategy	Check metrics
Reducing founder dependence	Hire developer (M5), operations & CS (M4) and ad sales · document shared technology · external QA	Hiring schedule · release cycle
SHAREON payment & ID-verification contracts	PG, ID-verification and payout-agency contracts right after incorporation (M1) · payments go live after launch quality gates are passed	M3 launch decision
Speed of securing suppliers and advertisers	Direct sales & listing on suppliers' behalf before launch · high-supply categories first · ads sold with supplier performance reports	Supplier count · ad purchase rate
Subscription conversion	Family-level pricing (₩9,900 · ₩7,900) · family invites · records stay free	Invite rate · conversion · churn
Privacy & ad trust	Children's and seniors' records never used for targeting or sold · ad labeling and frequency rules · legal review	Reports & complaints
4 businesses run in parallel	Fixed order: SHAREON → PETLOG & BABYLOG → ONGIL · resources reallocated quarterly	Quarterly target achievement

Operating principles

- One big launch at a time — expanded launch of three businesses Feb–Mar, stabilization Mar–May, ONGIL restart in June, ONGIL launch in October
- Review each business's targets every quarter and allocate more resources to the best-performing revenue streams
- Staged expansion: staff and ad-sales costs grow only as revenue arrives

Next growth goal **Check metrics for each task are included in the investor report at the end of every quarter.**

Detailed execution tasks and responses are on the last page of each business in the detailed appendix.

Founder and incorporation plan

Being a solo founder is what produced the launch speed so far. The investment adds development, operations and ad-sales staff to scale execution.

Founder workload — now and after investment

Work	Now (solo CEO)	After investment
Product & development	Planning, design, development and QA of 4 apps	M5: 1 developer (payments, settlement, CARE) · external QA
Operations & CS	CEO	M4: 1 operations & CS staff (SHAREON first)
Security & legal	Internal check	External security review · legal advisory
Sales & partnerships	Talks with 8 partners · 25 OI sets prepared, applied, meetings confirmed	Focus on SHAREON supplier sales
Finance & incorporation	Sole proprietorship · bookkeeping	Incorporation · bookkeeping

Incorporation

Current	Sole proprietorship NEWON · opened 2026-03 · CEO Nawon Kyung
Timing	M1, around the investment agreement — schedule set to match the agreement structure
Assets transferred	Apps, domains, trademarks, store accounts, source code and server accounts transferred to the corporation
Prerequisite effect	PG merchant, ID-verification and payout-agency contracts become possible in the company's name
Cost	Advisory on registration, articles and asset transfer ₩2M (estimate)

Hiring and outsourcing schedule and costs are in detailed appendix F03.

What the founder must do and what to hand off: The CEO owns product direction, SHAREON supplier relationships and investor reporting; repetitive development, QA and CS move to hires and outsourcing, which proceed alongside the investment.

Next growth goal **Incorporation in M1 · PG merchant (in the company's name) in M3 · developer joins in M5 — these three lead every quarterly report.**

The original business registration date will be submitted as a masked copy during due diligence. The incorporation schedule and assets to transfer will be set after legal advisory.

Investment ask and growth milestones

₩300M

Priority request

SHAREON nationwide launch · broader BABYLOG/PETLOG monetization · commercialize ad products · win business customers · ONGIL restart (Jun 2027) and final launch (Oct 2027)

₩200M

Negotiable alternative

Same strategy at an adjusted pace (p.42)

In talks

Valuation · equity stake

Incorporation proceeds together with the investment agreement

Milestone

After investment	Growth targets	Investor reporting
30 days	Incorporate · connect analytics · start PG & ID-verification contracts	Operating-metric baselines
90 days	SHAREON launch decision · business supplier pre-onboarding · BB & PL Family Premium	Launch decision result
6 months	SHAREON national full launch · ad products launch · developer joins	Transaction, ad & subscription metrics
12 months	ONGIL final launch (Oct 2027 target) · PETLOG CARE & business premium · BABYLOG institution SaaS · monthly revenue ₩6.1M+ (base)	Revenue by stream
18 months	Monthly revenue ₩12.5M–₩38.4M · high-growth target ₩106M · follow-on round	Unit economics by business

Fund management

- Investment managed in a corporate account, with monthly spending reports
- SHAREON marketing spend starts with launch and payment go-live
- Ads & partnerships sales staff hired when the ad-revenue threshold is met

Next growth goal **At due diligence we submit store consoles, product demos, the financial model and partner materials.**

Valuation and equity stake are subject to negotiation. The financial outlook is a business-plan scenario, not a guarantee of returns.
